## Award-winning quality

**An integrated management system ensures controlled processes at SAUTER. Certificates and awards give the customer security and a means of making comparisons.**

Our head office in Basel is where the SAUTER Group Executive Board sits, and is also a development and production site. Because SAUTER places great emphasis on controlled processes, the integrated management system is based on quality management as per ISO 9001; it also meets the requirements of environmental management according to ISO 14001, and occupational safety and health management as per OHSAS 18001.

- The management system is certified and forms the basis for the country-specific certification of all SAUTER companies.
- The system secures knowledge and expertise and contributes to reducing risks.
- Laws and standards for quality, environmental and work safety management are fulfilled.

### With SAUTER into Green Building

SAUTER products, solutions and services in building management have been certified and given awards many times. Our product range fulfils the requirements for obtaining the Green Building certificates. SAUTER is IQNet-certified, and certain products have the eu.bac award or the BACnet Test Laboratory (BTL) quality seal. This guarantees quality, precision and functionality.

**Our BTL-certified products are:**

- [Modular automation station SAUTER modu525](#)
- [Room automation station SAUTER ecos 5](#)
- [Building management software SAUTER novaPro Open](#)

**Our eu.bac-certified products are:**

- [Room automation station SAUTER ecos502](#)
- [Room automation station SAUTER ecos500](#)
- [Intelligent unitary controller SAUTER ecos](#)

### Pioneer in system certification

As one of the first eu.bac members, SAUTER is among the pioneers of eu.bac system certification. The company is certified to train eu.bac system auditors. The company's own auditors certify buildings all over Europe. The manufacture-independent system certification is based on a scientifically-proven approach, on European standard EN 15232 and on a standardised process. This gives the customer security and a means of making comparisons.

### AMEV certificate for SAUTER room automation stations

The three (room) automation stations of the SAUTER EY-modulo family of systems received the certificate for the AS-A profile of the Mechanical and Electrical Engineering Working Party of National, Regional and Local Authorities (AMEV). The AMEV certificate is decisive on the German market, especially for the public tender offers of state and municipal administrations. It gives the customer a guarantee that the product fulfils the detailed requirements for its use on the German market. The current AMEV recommendation combines the BACnet 2007 recommendation and the existing recommendations, and also takes DIN EN ISO 16484-5 into account.

### Quality, the environment and work safety

The relationships to standards ISO 9001, ISO 14001 and OHSAS 18001 are regulated.

#### Quality management ISO 9001:2008

The quality management applies to the whole SAUTER Group.

#### Environment management ISO 14001:2004
